PRESS RELEASE

Smartphone Application for seeding

KUHN has developed a new Smartphone application to help farmers with seed drill settings thus optimizing seeding.

The application is available on Appstore (for iPhone and iPad users) and on Google Apps Marketplace (for Android Smartphone users). It has various valuable functions for seeding.

The first function is the setup wizard. With this, owners of a KUHN seed drill (PREMIA, INTEGRA, SITERA, VENTA EC, VENTA LC, VENTA AL, VENTA TF 702) can find the right machine settings effortlessly.

After selecting the type of seed drill, working width and the number of rows, the crop and desired application rate can be entered. According to these parameters, a suggested setting is then given.

After a trial run at this setting, the user can enter the weight collected, in order to get an optimized setting for that seed variety. This guarantees that the seed drill is set correctly which in turn ensures high quality seeding.

Settings can also be saved. This is a great time saver when working with the same seeds again.

In addition, the application has a converter calculator to facilitate the change from seeds/m² to kg/ha or vice versa: no more errors!

This application is available in 3 languages: French, English and German. It can be downloaded from mid-September.
