DISCOVER XM 2

New range of disc harrows with central beam: Quality, reliability and faultless robustness

This new Discover range with central beam concentrates technical improvements implemented on the machine for:

- 1- Improved ease of use.
 - 2- Increased robustness and technicality.
-
- 3 coupling positions optimize the pull point height.
 - A large dimension central beam (300 x 300mm square) that ensures sturdiness, accessibility and visibility at work.
 - A central carriage with large width (400 ou 500 mm) and large diameter (870 mm) tyres provide optimum carrying capacity.

Assets for the Discover XM 2 range :

1. **Robustness:** The integral casing provides improved rigidity and robustness over the whole gang holder for working depth evenness.
2. **Reliability:** New front and rear housing guard attachment for easier removal and to ensure an all-round protection of the housings.
3. **Quality of work:** The larger side deflector adjustment ranges allow adaptation at any speed and in any working conditions to avoid ridging.
4. **Resistance :** Arcor® treated pins for increased wear resistance.
5. **Design :** New look.
